QA-101 COMPACT DISC ANALYZER

LOW-COST CD-ROM TESTING!

The Clover Systems QA-101 is the world's first low-cost solution to CD and CD-ROM testing. It is a self-contained system that measures all error syndromes plus dropouts. It can be used by manufacturers, distributors, CD-ROM publishers, and end users to provide a simple qualitative measure of disc quality. It is no longer necessary to spend tens of thousands just to measure error rates.

Current, average, and peak values for all errors can be displayed on the built-in LCD display. Total E32 (uncorrectable) errors and dropouts are also displayed. A red LED warns at a glance if an uncorrectable error is encountered.

An RS-485 serial interface allows up to 32 QA-101's to be connected to a computer on one twisted pair. In this configuration, data can be uploaded to the PC where it can be displayed graphically, printed, and stored.

* Completely self-contained; no computer required
* Measures current, average & peak of:
  BLER, E11, E21, E31, E12, E22, E32
* Measures Total E32 and Dropouts
* Alarm for uncorrectable errors
* Serial computer interface
* Only $2,500
